
system boundary — one facility-year at nameplate IT load
Energy (R)
Water (W)
Food (F)
Land (L)
Health (H)
Community (CM)
E-waste (EW)
Heat island (UHI)
Grid (G, GR)
Supply chain (SC)
Scenarios (SM)
Nexus score (NX)
Excluded flows
• transmission losses
• upstream fuel cycle
• secondary PM2.5 / ozone (local plume; grid term uses BPT)
• hydro reservoir evaporation
• construction-phase emissions
• end-of-life processing
• housing / labour markets
tier 0: identity arithmetic (always kept)
tier 1: information coupling (severed in sequential review)
tier 2: scope boundary R>H (severed in sequential review)
tier 3: scale proxy R>SC (fallback artefact; reported separately)
normalized into the composite score
